

**TECHNICAL BULLETIN # 1036**

**SUBJECT: InsulFoam EPS and REACH**

**DATE: June 14, 2021**

Insulfoam, a division of Carlisle Construction Materials is a committed steward of our industry and believes in transparency, sustainability, recycling and providing pertinent information on the products we produce.

REACH or the Registration, Evaluation, Authorization and Restriction of Chemicals is a European regulation that started in December of 2006. REACH maintains a list of chemicals that must be reported on products that are imported into Europe. Insulfoam supplies many OEM manufacturers components that must declare if their products contain chemicals that are on the current REACH list known as the Candidate List of Substances of Very High Concern (SVHC). The last updated list is dated January 19, 2021.

InsulFoam EPS does not contain any of the 211 SVHC substances listed on the January 19, 2021 REACH list. Therefore, InsulFoam EPS contained within products is compliant with the requirements of REACH.
